

**Start
Here!**

Day 1
Python Fundamentals
(variables, data types, input,
type conversion, strings).

Day 2
Expressions & Operators
(arithmetic, comparison, logical
operators, indexing,

Day 3
Conditions & Validation (if,
elif, and else).

Day 4
Loops &
Iteration (for
and while
loops, range(),
counters,
accumulators,
break,
continue, and
nested loops)

Day 5
Functions
Built reusable functions using
parameters, arguments, default
values, return, and docstrings.

Day 6
Scope & Modules
Explored namespaces, LEGB
scope, imports, modules, aliases,
and the main guard.

Day 7
Python Collections (lists, tuples,
sets, dictionaries, and nested
collections).

Day 8
Comprehensions
(list, set, and
dictionary
comprehensions).

Day 9
Copying & Performance
(generators, aliasing,
shallow/deep copy, and basic
Big O performance).

Day 10
Object-Oriented Programming
Created classes and objects using
init, self, attributes, methods,
and object state.

Day 11
File Handling, CSV, JSON &
Exceptions (CSV and JSON
data and handled errors using
try, except, else, finally, and
raise).

**python
Roadmap**
